

Bremar Police Solutions

Hat Rack Installation

- **Step One:** With the prongs facing down and towards the front of the patrol vehicle, simply slide the "Hat Rack" in-between the top of the roll bar and the bottom of the headliner.
- **Step Two:** Slide the "Hat Rack" in-between the roll bar and the headliner far enough so that there is enough friction to hold the hat tight up against the headliner. The "Hat Rack" was designed to allow enough clearance should there be a Rifle or Shotgun Rack attached to the roll bar.
- **Step Three:** Should the gap between the roll bar and headliner be too great, simply place the largest foam insert on top of the existing roll bar foam and start from the beginning.
- **Step Four:** Turn your hat upside down so that the brim is facing the headliner and the top of the hat is facing towards the floor. Slide the hat back into the "Hat Rack" so the brim will be seated on the second lip of the hanger.

Ride-Along Installation

- **Step One:** With the prongs facing towards the front of the vehicle, simply slide the bottom of the "Ride-Along" between the gap of the passenger seat backrest and the bottom seat cushion.
- **Step Two:** With the top of your hat facing the windshield, simply slide your hat down between the prongs and the backrest.
